## Key Business Insights:

### 1 Sales Trend Insight

Sales fluctuate across months, indicating seasonal demand patterns. The business can increase marketing during peak months to maximize revenue.

### 2 Profitability Insight

Although sales may be high, profit margins may vary across products, suggesting some categories are more profitable than others.

### 3 Customer Purchasing Behavior

Average order value shows customers often purchase multiple products in a single transaction, which indicates potential for bundle or cross-selling strategies.

### 4 Product Category Performance

Certain product categories contribute the majority of total revenue, meaning the company should prioritize inventory and promotions for these high-performing categories.

### 5 Strategic Decision Insight

By monitoring sales, profit, and order trends together, the company can optimize pricing, marketing campaigns, and product focus to improve overall profitability.
